Ashutosh Gola

+91 7895527454 | ashutoshgola91@gmail.com | LinkedIn | GitHub | Portfolio

Education

Sharda University — Sept 2022 – June 2026
B.Tech in Computer Science | GPA: 7.8/10 — *Greater Noida, India*

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, SQL
Backend: Spring Boot, Hibernate/JPA, Node.js, Express.js, REST APIs, Socket.IO, WebSockets
Frontend: React, Next.js, HTML5, CSS3
Databases: MySQL, PostgreSQL, MongoDB
DevOps & Cloud: Docker, Kubernetes, Prometheus, Grafana, AWS (EC2), Nginx, GitLab CI/CD, Postman, Github

Work Experience

Full Stack Developer Intern | *MERN, REST APIs, Socket.IO, Node.js* — May 2025 – Jul 2025
CipherByte Technologies — *Remote*

- Built **ConnectSphere**, a **MERN** stack social networking app where users create profiles, connect with each other and chat, by developing the **React** front end and **Node.js**/**Express** APIs on **MongoDB**.
- Delivered **5+ REST APIs** in **Node.js** and **Java** for the platform, and checked every endpoint with **Postman** before it was released.
- Made chat and notifications work live, so messages reach users instantly without a page refresh, by adding **Socket.IO** and **WebSockets**.
- Worked in **Agile** sprints with **Git** and **GitLab CI/CD**, took part in peer **code reviews**, and tested all AI-assisted code before merging it.

Projects

SplitAI | *Next.js, Node.js, MongoDB, Docker, AWS EC2, Nginx* — GitHub | Live

- A full-stack web app where friends split shared expenses and instantly see who owes whom in each group.
- Fixed a **race condition** that corrupted shared expense data, as measured by correct balances under simultaneous writes, by using atomic **MongoDB** transactions.
- Put the app live for real users, as measured by a public URL that stays up after every update, by deploying it on **AWS EC2** with **Docker**, **Nginx** and a **CI/CD** pipeline.

Code-Collab | *React, TypeScript, Node.js, Socket.IO, Docker, Kubernetes, Grafana* — GitHub | Live

- A browser-based code editor where several people write and edit code together live in one room.
- Let multiple users edit code together in real time, as measured by changes showing up instantly on every screen, by building it with **Socket.IO**, **React** and **TypeScript**.
- Made the app easy to run and watch, by deploying it with **Docker** and **Kubernetes** and tracking its health in **Prometheus** and **Grafana** dashboards.

StartupEcosystem | *Java, Spring Boot, Hibernate/JPA, MySQL, Docker* — GitHub | Live

- A Spring Boot backend platform that connects startups with investors through separate modules.
- Delivered **15+ REST endpoints** across **4 modules**, as measured by a clean controller, service and repository split, by applying **OOP** and layered design in **Spring Boot**.
- Stored platform data in **5+ related entities**, as measured by consistent relations between tables, by modeling a **MySQL** schema with **Hibernate/JPA** and packaging the app with **Docker**.

Certificates

Oracle: Database Foundations and PL/SQL Certifications
Postman: Postman API Fundamentals Student Expert
AWS APAC (Forage): Solutions Architecture Job Simulation, Jun 2025
Sharda University: MERN Stack Certificate, May 2024

Achievements

Solved 400+ problems on LeetCode
Research Paper - GSIR 2025: Presented paper on AI-based startup–investor matchmaking.
GSSoC 2025 - Tech Contributor: Contributed to open-source projects through collaborative development.
